Java

```java
class Solution {
  public void duplicateZeros(int[] arr) {

  }
}
```

JavaScript

```javascript
/**
 * @param {number[]} arr
 * @return {void} Do not return anything, modify arr in-place instead.
 */
var duplicateZeros = function(arr) {

};
```

TypeScript

```typescript
/**
 Do not return anything, modify arr in-place instead.
 */
function duplicateZeros(arr: number[]): void {

};
```

C++

```
class Solution {
public:
  void duplicateZeros(vector<int>& arr) {

  }
};
```

C#

```
public class Solution {
  public void DuplicateZeros(int[] arr) {

  }
}
```

Kotlin

```
class Solution {
  fun duplicateZeros(arr: IntArray): Unit {

  }
}
```

Go

```
func duplicateZeros(arr []int)  {
}
------------------------------------------------------------------------
```
